

# GENERATOR SAFETY TIPS

1

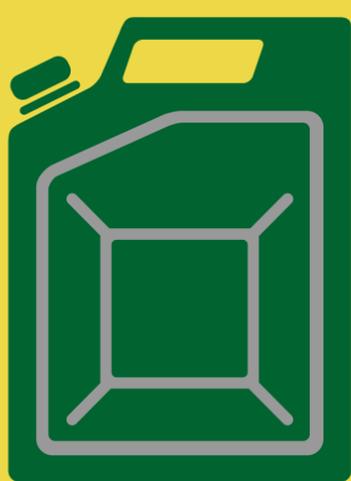

## Carbon Monoxide kills!

Portable generators produce carbon monoxide, a colorless, odorless, and tasteless gas.

2

## Where NOT to use your generator:

- DO NOT use it inside an enclosed structure like a garage.
- DO NOT use within 20 feet of your home.

## Cool before refuel!

3

Turn off the generator and wait 15 minutes before refueling. This reduces the risk of accidental fires.

4

## Stay Alert!

Place at least one battery-operated carbon monoxide detector on each level of your home near bedrooms. Call 911 if the alarm goes off.

5

## Protect your household.

If you or someone else experiences headaches, dizziness, or confusion, immediately vacate your home and go to your nearest healthcare provider.
