

Lead Service Line Inventory Numbers

The U.S. Environmental Protection Agency’s (USEPA) Lead and Copper Rule Revisions (LCRR) requires water systems to develop and maintain a material inventory of water services lines (on both the water system side and the customer side). The material identification will lead to classification of water service lines as either a lead, galvanized requiring replacement, unknown, or a non-lead service line. In late 2024, the initial lead service lines were due. As new information becomes available and replacements take place, water systems will update lead service line inventories.

Lead	where the system-owned or customer-owned portion of the service line is made of lead.
Galvanized requiring replacement (GRR)	where a galvanized service line is or was at any time downstream of a lead service line or is currently downstream of a “Lead Status Unknown” service line.
Non-Lead	where the service line is determined through an evidence-based record, method, or technique not to be lead or GRR.
Lead status unknown	where the service line material is not known to be lead, GRR, or a non-lead service line, such as where there is no documented evidence supporting material classification.
