

# SLEEVES UP BRING BACK LOUISIANA

## 6 months and up EUA Resource Toolkit for Partners

The COVID-19 vaccine is now available to children ages 6 months and up. Following rigorous review of the data, the FDA and CDC have announced that the three-dose Pfizer-BioNTech vaccine is now available to children 6 months to 4 years old, and the two-dose Moderna vaccine is now available to children ages 6 months and up.

After closely reviewing the data and guidance, the Louisiana Department of Health recommends that all eligible children 6 months old and above receive the COVID-19 vaccine to protect themselves and minimize harmful effects of COVID-19. With COVID-19 levels still high in Louisiana, vaccination against COVID-19 will strengthen your child's immune system, help prevent severe COVID-19 symptoms, and reduce the likelihood of them developing conditions or experiencing complications from COVID-19.

If you are a parent/caregiver to a child 6 months or older, go ahead and reach out to your pediatrician now to inquire about their intent to provide the COVID-19 vaccines for your child's age. If you do not have access to a pediatrician, you can call our COVID-19 Vaccine Support Hotline at 1-855-453-0774.

### RISK OF COVID TO CHILDREN

- Tragically, LDH has reported a total of 21 children in Louisiana have died from COVID-19 since the pandemic began, all of whom were not up to date on their COVID-19 vaccinations.
- Medical reports show COVID can trigger a serious medical condition in some children that causes their heart, brain, and other organs to swell. There have been more than 300 cases of this COVID-related syndrome in Louisiana alone. Vaccinating your children will lower their risks of getting this serious condition as well as protect them from other COVID complications.

Staying up-to-date on our COVID-19 vaccinations is key to keeping our families safe and enjoying summer with confidence.

It's understandable that parents may have a lot of questions. Parents are encouraged to rely on trusted sources of information like the FDA, CDC and LDH.

## **What you can do:**

- Help LDH combat misinformation by sharing the facts about the impact of COVID-19 and how getting vaccinated and boosted can protect individuals from severe COVID-19 outcomes.
- Point your friends and families to reliable sources of information like their healthcare provider, LDH, the CDC and the FDA.
- Talk to your child's doctor today about the COVID-19 vaccines.
- If you do not have a healthcare provider, you can find a nearby vaccination at [www.vaccines.gov](https://www.vaccines.gov) or [ldh.la.gov/kidsvax](https://ldh.la.gov/kidsvax).
- If you have questions or need help scheduling an appointment, you can call Louisiana's COVID-19 Support Hotline at 855-453-0774.

## **HOW TO GET A COVID VACCINE IN LOUISIANA**

LDH recommends everyone ages 6 months and older get the COVID-19 vaccine, and that everyone ages 5 and older get boosted as soon as they are eligible.

- COVID-19 vaccines are free and available in your community right now.
- For a list of locations, visit LDH's vaccine directory at [ldh.la.gov/kidsvax](https://ldh.la.gov/kidsvax) or visit [vaccines.gov](https://www.vaccines.gov), maintained by the federal government.
- To get a list of vaccine locations near you, text your ZIP code to GETVAX (438829) in English, or VACUNA (822862) in Spanish.
- If you have questions or need help scheduling an appointment, call 211 or Louisiana's COVID-19 Support Hotline at 1-855-453-0774.

Vaccines are a safe and effective way to reduce your spread of the virus, protect your child from developing severe symptoms, serious conditions or complications from COVID-19, and strengthen your child's immune system.</p> </div>

<p>Q: What are the side effects of the COVID-19 vaccines?</p> <p>A: COVID-19 vaccines can cause mild, short-term side effects like fatigue, headache, muscle pain and chills. These side effects are normal &amp; a positive sign that your body is building protection.</p> <p>You may have more questions, that's okay! Rely on trusted sources of information, like your child's doctor, @CDCgov, and @LAHealthDept.</p> <p>Learn more: visit <a href="http://ldh.la.gov/kidsvax">ldh.la.gov/kidsvax</a> or call Louisiana's COVID-19 Support Hotline at 855-453-0774.</p>	<p><b>FAQ</b></p> <p><b>Q: WHAT SIDE EFFECTS CAN COVID-19 VACCINES CAUSE IN CHILDREN?</b></p> <p><b>A:</b> Like many vaccines, COVID-19 vaccines can cause mild, short-term side effects, like fatigue, headache, muscle pain and chills for a day or two. These side effects are normal and a positive sign that the immune system is responding to the vaccine.</p> 	<p><b>FAQ</b></p> <p><b>Q: WHAT SIDE EFFECTS CAN COVID-19 VACCINES CAUSE IN CHILDREN?</b></p> <p><b>A:</b> Like many vaccines, COVID-19 vaccines can cause mild, short-term side effects, like fatigue, headache, muscle pain and chills for a day or two. These side effects are normal and a positive sign that the immune system is responding to the vaccine.</p> 
<p>Q: What's the risk of #COVID19 to children?</p> <p>A: Since March 2020, Louisiana has tragically lost 21 children to COVID, all of whom were not up to date on their COVID-19 vaccinations. Medical reports show COVID can trigger a serious medical condition in some children that causes their heart, brain, and other organs to swell. There have been more than 300 cases of this COVID-related syndrome in Louisiana alone. Vaccinating your children will lower their risks of getting this serious condition as well as protect them from other COVID complications.</p> <p>You may have more questions, that's okay! Rely on trusted sources of information, like your child's doctor, @CDCgov, and @LAHealthDept.</p> <p>Learn more: visit <a href="http://ldh.la.gov/kidsvax">ldh.la.gov/kidsvax</a> or call Louisiana's COVID-19 Support Hotline at 855-453-0774.</p>	<p><b>FAQ</b></p> <p><b>Q: WHAT'S THE RISK OF COVID-19 TO CHILDREN?</b></p> <p><b>A:</b> Medical reports show COVID can trigger a serious medical condition in some children that causes their heart, brain, and other organs to swell—even affecting kids who had minimal or no COVID symptoms. There have been more than 300 cases of this COVID-related syndrome in Louisiana alone. Vaccinating your children will lower their risks of getting this serious condition as well as protect them from other COVID complications.</p> 	<p><b>FAQ</b></p> <p><b>Q: WHAT'S THE RISK OF COVID-19 TO CHILDREN?</b></p> <p><b>A:</b> Medical reports show COVID can trigger a serious medical condition in some children that causes their heart, brain, and other organs to swell—even affecting kids who had minimal or no COVID symptoms. There have been more than 300 cases of this COVID-related syndrome in Louisiana alone. Vaccinating your children will lower their risks of getting this serious condition as well as protect them from other COVID complications.</p> 

There's a lot of misinformation floating around about the #COVID19 #vaccines, especially how the vaccines impact children.

As with other age groups, #vaccines developed for children are under the most intensive safety monitoring in U.S. history. It's important for parents and families to rely on trusted sources of information like your child's doctor, @CDCgov, and @LADeptHealth.

Vaccinating children will strengthen your child's immune system, help prevent severe #COVID19 symptoms, and reduce the likelihood of them developing conditions or experiencing complications from COVID-19.

Learn more: ldh.la.gov/kidsvax or call the COVID-19 Support Hotline: 1-855-453-0774.
