## CLINICAL OUTCOMES

A total of 95% (135/142) of clients were defined as in care. These clients had at least one CD4 or viral load test reported in the past year.

77% (109/142) of clients were virally suppressed. These clients had a viral load test reported in the past year with the most recent result <200 copies/mL.

For clients served by NO/AIDS Region 3 who were in care, 81% (109/135) were virally suppressed. For the larger HIV+ population living in Region 3 who were in care, 87% (586/672) were virally suppressed.

Clients who are female, white, and older were more likely to be virally suppressed.

## Louisiana Ryan White HIV/AIDS Part B CBO Region 3 Annual Report January 01, 2019 - December 31, 2019

### UNMET NEED

Unmet need includes persons who are defined as out of care. These persons know their positive HIV status and are not receiving HIV-related medical care. Persons living with HIV who have no evidence of receiving a viral load test or CD4 count within a 12-month period meet the definition of unmet need. Furthermore, unmet need has been defined here only to include persons with a lab reported to the health department within the last 5 years (on or after January 01, 2015).

13% (104/776) of PLWH in Region 3 met the definition for unmet need between January 01, 2019 and December 31, 2019.

Males, Blacks and Hispanics, and persons 13-44 years old were most likely not to be receiving HIV-related medical care.

Parishes with the largest proportion of persons with unmet need include St. John the Baptist and Terrebonne.

### NUMBER OF PERSONS LIVING WITH HIV WHO MEET UNMET NEED CRITERIA\* 104

GENDER	In Care*		Not In Care†	
	n	pct	n	pct
